Author Index

Akkizidis, I. S.	Fuzzy clustering methods for identifying and modelling of non-linear control strategies	437–452
Al-Balushi, K. R.	Use of time domain features for the neural network based fault diagnosis of a machine tool coolant system	199–207
Bates, D. G.	Quantifying the robustness of flight control systems using Nichols exclusion regions and the structured singular value	625–638
Ben-Akiva, M.	Route guidance and information systems	317–324
Benton, S. E.	Fast sampling control of a class of differential linear repetitive processes	521–530
Bobál, V.	Multivariable adaptive decoupling temperature control of a thermo-analyser	365–374
Borghi, M.	Hydraulic locking-in spool-type valves: tapered clearances analysis	157–168
Bottom, J.	Route guidance and information systems	317–324
Bovy, P. H. L.	State-of-the-art of vehicular traffic flow modelling	283–303
Chang, K.-M.	Hyperstability approach to the synthesis of adaptive controller for uncertain time-varying delay systems with sector-bounded non-linear inputs	505–510
Chen, B. P.	Cross-coupling design of generalized predictive control with reference models	375–384
Chen, C.-M.	The discrete-time equivalent of an analogue controller by the parabolic approach	29–36
Chen, S.-H.	Robust rank preservation of matrices with both structured and unstructured uncertainties and its applications	499–504
Chen, Y. J.	Safe platoon control of automated highway systems	531–543
Cheng, W.-C.	Non-linear system identification using an artificial immune system	569–585
Chochia, G. A.	Numerical and experimental investigations on a shock wave related cavitational flow	71–91
Chou, J.-H.	Robust rank preservation of matrices with both structured and unstructured uncertainties and its applications	499–504
Chuang, H.-S.	Design and implementation of force and position control with anti-windup conditioned transfer compensation	57–70
Clarkson, P. J.	Observations on the controllability of motion of two-wheelers	143–156
Dassanayake, H. P. B.	An architecture for system-wide fault detection and isolation	37–46
Dimirovski, G. M.	Adaptive control of multiple robots manipulation on a dynamical environment	385–404
Dolan, J. M.	Adaptive fuzzy throttle control for an all-terrain vehicle	189–198
Dostál, P.	Multivariable adaptive decoupling temperature control of a thermo-analyser	365–374
Duan, G. R.	Robust model reference control for multivariable linear systems subject to parameter uncertainties	599–610
Florian, M.	Traffic assignment: equilibrium models	305–315
Fong, I.-K.	Robust rank preservation of matrices with both structured and unstructured uncertainties and its applications	499–504
Goodman, C. J.	An architecture for system-wide fault detection and isolation	37–46
Govan, M.	Predictive control of fast output–sampled digital feedback systems via a polynomial approach	221–233
Gu, D.-W.	On the control design of a gyro test table	169–175
Hajiyev, Ch.	Stopping rules formation and faults detection in parametric identification problems	357–363
Harris, C. J.	Neurofuzzy control using Kalman filtering state feedback with coloured noise for unknown non-linear processes	423–435
He, Y.	On the control design of a gyro test table	169–175
Hearn, D. W.	Traffic assignment: equilibrium models	305–315
Hong, X.	Neurofuzzy control using Kalman filtering state feedback with coloured noise for unknown non-linear processes	423–435
Hoogendoorn, S. P.	State-of-the-art of vehicular traffic flow modelling	283–303
Hounsell, N. B.	Urban network traffic control	325–334
Hourdakis, J.	Review of non-intrusive advanced sensor devices for advanced traffic management systems and recent advances in video detection	345–355
Huang, A.-C.	Safe platoon control of automated highway systems	531–543
Ikonen, E.	Non-linear process modelling based on a Wiener approach	15–27
Khor, E. F.	Automatic design of multi-variable quantitative feedback theory control systems via evolutionary computation	245–259

Khosla, P. K.	Adaptive fuzzy throttle control for an all-terrain vehicle	189–198
Kiddy, J.	Experimental validation of a damage detection technique for helicopter main rotor blades	209–220
Kureemun, R.	Quantifying the robustness of flight control systems using Nichols exclusion regions and the structured singular value	625–638
Lam, J.	Robust H_∞ control for uncertain state-delayed systems with sector non-linearity	511–520
Lee, T. H.	Automatic design of multi-variable quantitative feedback theory control systems via evolutionary computation	245–259
Liew, K. M.	On the control design of a gyro test table	169–175
Lin, G.-L.	Non-linear control with Lyapunov stability applied to spacecraft with flexible structures	131–141
Lin, R.-m.	Head actuator dynamics	1–13
Lin, Y.-T.	The tracking of a manoeuvring object by using an adaptive Kalman filter	125–130
Lin, Y.-Y.	Non-linear control with Lyapunov stability applied to spacecraft with flexible structures	131–141
Liu, F.-H.	The discrete-time equivalent of an analogue controller by the parabolic approach	29–36
Liu, G. P.	Robust model reference control for multivariable linear systems subject to parameter uncertainties	599–610
Liu, W. Q.	Robust model reference control for multivariable linear systems subject to parameter uncertainties	599–610
Lu, X. Y.	Robust tracking via sliding mode control for elastic joint manipulators	405–417
Luh, G.-C.	Non-linear system identification using an artificial immune system	569–585
McDonald, M.	Urban network traffic control	325–334
Macháček, J.	Multivariable adaptive decoupling temperature control of a thermo-analyser	365–374
Michalopoulos, P.	Review of non-intrusive advanced sensor devices for advanced traffic management systems and recent advances in video detection	345–355
Milani, M.	Designing hydraulic locking balancing grooves	453–465
Morris, A. S.	On the singular perturbation approach to trajectory control of a multilink manipulator with flexible links and joints	587–598
Najim, K.	Non-linear process modelling based on a Wiener approach	15–27
Nguyen-Schaefer, H.	Numerical and experimental investigations on a shock wave related cavitational flow	71–91
Ngwompo, R. F.	Physical model-based inversion in control systems design using bond graph representation. Part 1: theory	95–103
Ngwompo, R. F.	Physical model-based inversion in control systems design using bond graph representation. Part 2: applications	105–112
Noriega, J. R.	Fault diagnosis for unknown non-linear systems via neural networks and its comparisons and combinations with recursive least-squares based techniques	261–278
Owens, D. H.	Fast sampling control of a class of differential linear repetitive processes	521–530
Özgören, M. K.	Motion control of constrained systems considering their actuation-related singular configurations	113–123
Parks, G. T.	Observations on the controllability of motion of two-wheelers	143–156
Pines, D.	Experimental validation of a damage detection technique for helicopter main rotor blades	209–220
Postlethwaite, I.	On the control design of a gyro test table	169–175
Postlethwaite, I.	Quantifying the robustness of flight control systems using Nichols exclusion regions and the structured singular value	625–638
Ramming, M. S.	Route guidance and information systems	317–324
Roberts, C.	An architecture for system-wide fault detection and isolation	37–46
Roberts, G. N.	Fuzzy clustering methods for identifying and modelling of non-linear control strategies	437–452
Rogers, E.	Fast sampling control of a class of differential linear repetitive processes	521–530
Sahinkaya, M. N.	Input shaping for vibration-free positioning of flexible systems	467–481
Samanta, B.	Use of time domain features for the neural network based fault diagnosis of a machine tool coolant system	199–207
Scavarda, S.	Physical model-based inversion in control systems design using bond graph representation. Part 1: theory	95–103
Scavarda, S.	Physical model-based inversion in control systems design using bond graph representation. Part 2: applications	105–112
Seffen, K. A.	Observations on the controllability of motion of two-wheelers	143–156
Shieh, N. C.	Robust position control of a transportation carriage directly driven by a linear brushless d.c. motor	611–624
Shih, M.-C.	Hydraulic anti-lock braking control using the hybrid sliding-mode pulse width modulation pressure control method	177–187
Shladover, S. E.	Modelling and control issues for automated highway systems	335–343
Singh, R.	Neural-network-based sensor validation for gas turbine test bed analysis	47–56
